

Extra, extra, extra, extra safe.

The DEUS™ 3100 vertical rescue system features quadruple redundant braking systems for confidence and safety.

1. Hands-free figure-8.

The figure-8 rope path is combined with a hands-free configuration for the ultimate in ease-of-use and safety.

2. Disk brake.

As the control knob is turned toward the stop position, the disk brake gradually engages to slow or stop descent.

3. Manual brake.

Controlling the free end of the rope with a gloved hand and pulling it over the grooved side of the device creates friction that slows descent.

4. Centrifugal brake.

As rope passes through the device, it spins an integral centrifugal brake, which limits descent speed and guards against free fall.

You need to be confident in your equipment when lives are on the line.

The DEUS™ 3100 vertical rescue system brings safety to a whole new level. The revolutionary design includes quadruple redundant braking systems, so you can rely on it every time, in training or emergency use.

The DEUS 3100 is designed for use only with 7.5mm DEUS™ Fire ropes and 7.5mm DEUS™ Training ropes.

When lives are on the line, trust DEUS Rescue.
